The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/566,156

Applicant(s)

AKIYAMA ET AL.

Examiner

LILIANA CERULLO

Art Unit

2629

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 03 March 2009.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1 and 2 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-2 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SE/US)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

In an amendment dated, 3/03/2009, the Applicant amended claim 1. Currently claims 1-2 are pending.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 1 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 7,338,337. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant claim 1 is an obvious variation of the patented claim 1.

For example, the instant claim 1 teaches in the first aging period the scan voltage higher than the sustain voltage, and vice versa in the second aging period; the US Patent claim 1 teaches an equivalent limitation by claiming an alternating voltage

between the scan and the sustain. All other limitations are similar as shown by the underlined limitations in the table below.

Instant Claim 1	US 7,338,337 Claim 1
<p><u>A method of aging a plasma display panel having scan electrodes, sustain electrodes, and address electrodes, in which voltage is applied to at least the scan electrodes and the sustain electrodes,</u> the method contains a first aging period in which at least any one of the scan electrodes, the sustain electrodes, and the address electrodes undergo an application of <u>voltage for suppressing a self-erase discharge that follows an aging discharge generated by application of voltage in which the scan electrodes carry a voltage level higher than the sustain electrodes;</u> and a second aging period in which at least any one of the scan electrodes, the sustain electrodes, and the address electrodes undergo an application of voltage for suppressing a self-erase discharge that follows an aging discharge generated by application of voltage in which the <u>sustain electrodes carry a voltage level higher than the scan electrodes.</u></p>	<p><u>A method of aging a plasma display panel containing a scan electrode, a sustain electrode, and a data electrode, the method comprising: when applying a voltage having an alternating voltage component at least between the scan electrode and the sustain electrode to perform an aging discharge, applying an erase discharge-suppressing voltage for suppressing an erase discharge that occurs after the aging discharge to at least one of the scan electrode and the sustain electrode,</u></p> <p>at a predetermined moment in each of a portion of a <u>period of the alternating voltage component of the voltage when the scan electrode has a voltage level that is higher than that of the sustain electrode</u> and a portion of the period of the alternating voltage component of the voltage when the sustain electrode has a voltage level that is higher than that of the scan electrode.</p>

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. **Claim 1** is rejected under 35 U.S.C. 102(b) as being anticipated by Fujitsu in Japanese Publication JP-09-251841-A (hereinafter Fujitsu). Note that a machine translation of the Japanese document was used to cite the detailed description.

Fujitsu discloses a method of aging a plasma display panel (para. 1) having scan electrodes, sustain electrodes, and address electrodes (Dwg. 4 X, Y and A electrodes), in which voltage is applied to at least the scan electrodes and the sustain electrodes (Dwg. 4 VH voltage applied to X and Y), the method contains a first aging period (Dwg. 4, period during which the Y electrodes have a voltage VH, and the X electrodes have a voltage of zero) in which at least any one of the scan electrodes, the sustain electrodes, and the address electrodes undergo an application of voltage for suppressing a self-erase discharge (Dwg. 4, voltage applied to A electrodes. Para. 38 and 21 explain that by application of a voltage to the address electrodes A, there is no discharge between the address electrodes and the X electrodes) that follows an aging discharge (para. 13) generated by application of voltage in which the scan electrodes carry a voltage level higher than the sustain electrodes (Dwg. 4, period during which the Y electrodes are VH and the X electrodes are zero); and a second aging period (Dwg. 4, period during which

the Y electrodes have a voltage of zero, and the X electrodes have a voltage V_H) in which at least any one of the scan electrodes, the sustain electrodes, and the address electrodes undergo an application of voltage for suppressing a self-erase discharge that follows (Dwg. 4, voltage applied to A electrodes. Para. 38 and 21 explain that by application of a voltage to the address electrodes A, there is no discharge between the address electrodes and the X electrodes) an aging discharge (para. 13) generated by application of voltage in which the sustain electrodes carry a voltage level higher than the scan electrodes (Dwg. 4, period during which the X electrodes are V_H and the Y electrodes are zero).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. **Claim 2** is rejected under 35 U.S.C. 103(a) as being unpatentable over Fujitsu in Japanese Publication JP-09-251841-A as applied to claim 1, in further view of Yoo in US 7,173,374.

Fujitsu does not teach the second aging period lasting shorter than the first aging period. However, Yoo teaches a PDP apparatus where the scan and sustain electrodes have different protrusion sizes (Yoo, col. 4 lines 40-43 referring to Fig. 4), and as a consequence, the period during which a voltage is applied to the scan electrode (Yoo,

Fig. 4, T2) is shorter than the period during which a voltage is applied to the sustain electrode (Yoo, Fig. 4, T1) during a sustain period (Yoo, Fig. 4, unit pulse).

Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention to shorten Fujitsu's first aging period during which a voltage is applied to the scan electrode (as explained for claim 1), to be shorter than the second aging period during which a voltage is applied to the sustain electrode (as explained for claim 1), in order to use Fujitsu's aging method in Yoo's PDP apparatus with different electrodes protrusion sizes, and thus, obtain the added benefit of Yoo's apparatus of effectively generating an address discharge because of the large size of the protrusion of the scan electrode (Yoo, col. 5 lines 56-63).

Response to Arguments

Applicant's arguments with regards to the double patent rejection of claim 1, filed 3/03/2009 have been fully considered but they are not persuasive

In the Remarks pg. 5, Applicants argue that US 7.338.337 and the instant application differ in that the instant application requires a first aging period and a second aging period, unlike the patent, which requires only one period.

The Examiner must respectfully disagree. Note that the instant claim 1 refers to the first period as the one in which the scan electrodes carry a voltage level higher than the sustain electrodes (lines 8-9) and the second period as the one in which the sustain electrodes carry a voltage level higher than the scan electrodes (lines 14-15).

US 7,338,337 refers to a first portion as "a portion of a period during which the scan electrode has a voltage level that is higher than that of the sustain electrode" (col. 8 lines 8-10), and a second portion as "a portion of a period during which the sustain electrode has a voltage level that is higher than the scan electrode" (col. 8 lines 11-14).

Thus, the first aging period of the instant application is the same as the portion of US 7,338,337 when the scan electrodes have a voltage level higher than that of the sustain electrode and the second aging period of the instant application is the same as the portion of US 7,338,337 when the sustain electrodes have a voltage level higher than that of the scan electrodes.

Applicant's arguments with respect to the prior art rejection of claim 1 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LILIANA CERULLO whose telephone number is (571)270-5882. The examiner can normally be reached on Monday to Thursday 8AM-4PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Amr Awad can be reached on 571-272-7764. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
